

IEI PUZZLE Series Products Aiming to The Future with Next Generation Network Appliance

Proprietary Network Appliance

A Proprietary network appliance is a specialized electronic device that plugs into a network that is optimized for one specialized network purpose like switching, routing, protecting in a network environment. Proprietary network appliances include as Router, Load Balance, Bandwidth Management, Gateway security, WAN Optimization, application delivery controller (ADC), Next Generation Firewall (NGFW), Unified Threat Management (UTM), Intrusion detection system (IDS).

uCPE (Universal Customer Premise Equipment)

uCPE consists of virtual network functions (VNFs) running on a standard operating system hosted on an open server with NFV technology.

Now with NFV technology, we can create several virtual machine and install these VNFs in a x86 or ARM based uCPE. VNFs could include popular software services such as a virtual firewall, virtual load-balancing, or other software-defined wide area network (SD-WAN)service. Besiads with NFV Orchestration, uCPU could be an Edge computing or an AI inference computing systems.

Breakthrough Performance, Dependability and Security for the Next Generation of Networking Infrastructure

Equipped with a next-gen AMD EPYC[™] Embedded 3000 CPU (up to 8 cores, 16 threads, turbo Core up to 3.1 GHz) with up to 128G Dual-channels DDR4 RAM, the PUZZLE-A001 enables lightning-fast multi-tasking with low power consumption with four port 10GbE SFP+ and eight ports of 1GbE (Broadcom 5740) configuration. With a hardware secure multitenancy, the PUZZLE-A001 also provides Secure Root of Trust, Secure Memory Encryption, Secure Encrypted Virtualization to boost system performance while processing the safety of sensitive data. Integrated four ports 10GbE support lightning-fast throughput for bandwidth-demanding tasks.

PUZZLE-A001 supports AMD EPYC[™] Embedded 3000 Family

AMD EPYC[™] Embedded 3000 processors leverage AMD's advanced "Zen" architecture deliver up to a 52% improvement in instructions per clock (IPC) compared to legacy architectures. AMD EPYC[™] Embedded 3000 Series processors leverage an onboard AMD Secure Processor off loading encryption and decryption operations as well as executing for Crypto Co-processing that encrypts data before it feeds to the I/O, complemented with Hardware Validated Boot capabilities to ensure systems are booted from trusted software.

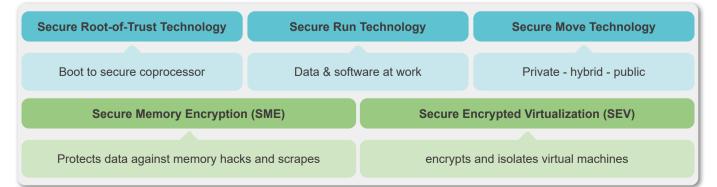

Outstanding Performance for Wide Applications

High Performance "Zen" Cores	Large Memory	Flexible Inte	egrated I/O
Wide range of core counts satisfying various industry needs	Rich memory density	Industry leading Ethernet connectivity	Extensible capacity
Up to 8 cores,16 Threads	4 DDR4 Socket Dual-Channel Up to 128GB	4 10GbE Ethernet 8 1GbE Ethernet	2 Standard PCle 1 Network module

Advanced Security Features

AMD EPYC[™] Embedded 3000 processors feature an onboard AMD Secure Processor for Crypto Co-processing that encrypts data before it feeds to the I/O, complemented with Hardware Validated Boot capabilities to ensure systems are booted from trusted software, with one-time programmable (OTP) capabilities enabling system designers' unique configuration.

Advanced capabilities include Secure Memory Encryption (SME) for defending against unauthorized memory access, and Secure Encrypted Virtualization (SEV) for securely isolating hypervisors and virtual machines (VMs) – with no application code changes required.

PUZZLE-A001 enable advanced NFV and SDN capabilities for service providers' next-generation networking infrastructure, spanning from the enterprise to the data center.

uCPE (Universal Customer Premise Equipment)

Highly parallelized CPU ideal for Network Function Virtualization (NFV) and Software Defined Network (SDN)

Security for business critical network data

Proprietary Network Appliance

- HW encrypted multi-tenant security
- High I/O for network connectivity
- · Memory capacity for large traffic datasets

Unified Threat Management (UTM)

Unified threat management or UTM is a single network appliance for all-inclusive security functions, such as network firewall, intrusion detection/prevention system (IDS/ IPS), anti-virus gateway, anti-spam

gateway, VPN, content filtering, load balancing, data loss prevention and appliance monitoring.

UTM appliances offer cost-effective, all-in-one security ideal for small/medium businesses, remote offices and retail networks.

Next Generation Firewall (NGFW)

Both NGFW and traditional firewalls aim to serve the same purpose of protecting an organization's network and data assets, but the most important differences between traditional and next-generation

firewalls is that NGFW offer a deep-packet inspection function that goes beyond simple port and protocol inspection by inspecting the data carried in network packets.

Intrusion Detection System (IDS)

An intrusion detection system (IDS) is a device that monitors a network or systems for malicious activity or policy violations. Any malicious activity or violation is typically reported either to an

administrator or collected centrally using a security information and event management (SIEM) system. A SIEM system combines outputs from multiple sources, and uses alarm filtering techniques to distinguish malicious activity from false alarms.

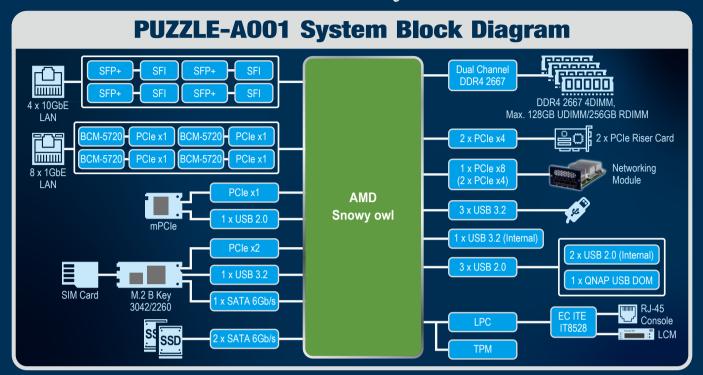

Application Delivery Controller

An application delivery controller (ADC) is a computer network device to improve the performance of web applications in a datacenter and it also could be a part of an application delivery

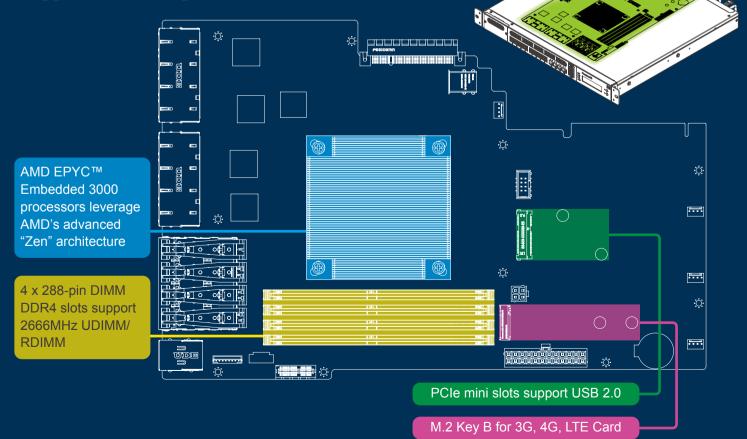

network (ADN). In order to deal with the increasing of Internet traffic, application delivery controller (ADC) also provide load balancing, and support multi-tenancy for deployment at data centers and a large number of sessions with a fast transaction rate.

PUZZLE-A001 Potential with Two PCIe x4 Slots

The PUZZLE-A001 features two PCIe (Gen3 x4) slots, allowing for installing full height, 200mm length Standard PCIe card, such us single/dual-port 10GbE NICs to accelerate applications that demand higher bandwidth such as virtualization, media workflows, and backup/ restoration tasks for an ever-growing amount of data.

Besides, expansion Card provides extra functions and computing power for the network appliance, Edge computing and AI inference, computing systems. 4G, 5G, WiFI could be supported by PCIe mini card or M.2 card. Adding a Smart NIC card will increase the performance of system and get specific network functions. Adding accelerator cards like GPU card, FPGA card and VPU card will provide extra performance for a Edge Computing or an AI Inference Computing system.

Two PCIe x4 Expansion Slots

Smart Fan Operation

Users can define CPU fan and system fan speed and temperature profile in the BIOS menu. When the system is in idle or running less demanding tasks, smart fan is able to bring down the level of noise produced by rotating fans. The adjustable settings allow the Puzzle-A002 to be quieter during operation while extending the fan's lifespan, enhancing system stability and durability.

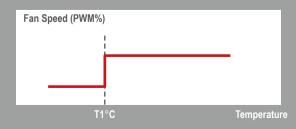

Puzzle Series

With fan speed and temperature trigger settings set, the fan speed can change seamlessly according to temperature readings.

Traditional System

Traditional system fan operation is detected by system's ON (fan at full speed) and OFF statuses.

Protecting Integrity and Authenticity of PUZZLE-A001

PUZZLE-A001 support TPM (Trusted Platform Module) which offers a broad portfolio of standardized security controllers to protect the integrity and authenticity of systems. With a secured key store and support for a variety of encryption algorithms, TPM security chips provide robust protection for critical data and processes through their rich functionality.

What is a TPM?

Trusted Platform Module (TPM) is an international standard for a secure cryptoprocessors that can securely store critical data such as passwords, certificates and encryption keys. TPM is a dedicated microcontroller designed to secure hardware by integrating cryptographic keys into devices and is used for secured crypto processes within computing devices as well as for secured storage of critical data. TPMs are typically used in business laptops, routers and embedded and IoT devices. The technical TPM specification was written by an industry consortium called Trusted Computing Group (TCG).

PUZZLE Software Introduction

PUZZLE Finder Software AP

Use your PC/Laptop as a development environment.

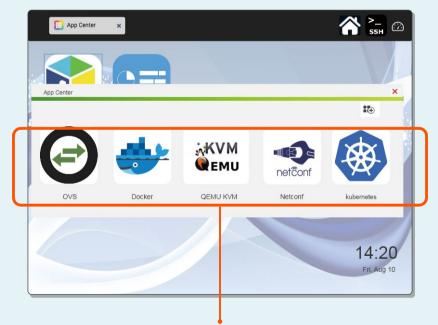

After installing Ubuntu 16.04 on your PUZZLE, you can install the PUZZLE Finder application on your PC/Laptop. PUZZLE Finder can help users quickly develop environment and network applications, and allow them to perform PUZZLE system management, resource monitoring, version maintenance, software installation, software update and gaining information of CPU, memory, Internet, etc.

Puzzle 🛇

Easy to Install

The APP center provides the most popular and configured applications.

Eliminate cumbersome installation steps; choose the APP you want to install. The APP can be downloaded and automatically installed. You can immediately enjoy the benefits of the software.

Utilize Virtual Technology, Create Unlimited Value

Docker containerization unlocks the potential for Dev and Ops. Freedom of choice, agile operations and integrated security for legacy and cloud-native applications. Implement Docker Lightweight Micro Services on the IEI PUZZLE.

Install the Open vSwitch (OVS) can implement domain cutting, QoS, data monitoring, and support openFlow.

Provide a more efficient Linux virtualization solution. Enhance the efficiency of virtualization by enhancing the operating mode of the CPU through QEMU-KVM.

Automate network configuration with Netconf; accelerate network equipment and services in enterprise in order to lower the cost.

Kubernetes is a system that helps us automate the deployment, expansion, and management of containerized applications.

PUZZLE System Status Monitoring

Graphical user interface allows you to easily get an overview of the PUZZLE system and monitor resource status of each PUZZLE system you have.

PUZZLE Series Technology

Virtualization is the process of creating a software-based, or virtual, representation of something, such as virtual applications, servers, storage and networks. Network functions virtualization or NFV is a network architecture concept that uses the technologies of IT virtualization to virtualize entire classes of network node functions into building blocks that may connect, or chain together, to create communication services.

PUZZLE Series Ecosystem

PUZZLE is about the uCPE consists of software virtual network functions (VNFs) running on a standard operating system hosted on an open server. An ideal uCPE deployment supports a multi-vendor multi-component construction and enables rapid development as well as open multi-vendor systems.

User Space

Puzzle 🛇

FD.io, OPNFV, OpenFastPath, OvS, DPDK, OpenDataPlane

Kernel Space

Hardware

Intel. MARVELL. BROADCOM. CAVIUM. AQUANTIA, Mellanox, NXP

PUZZLE Series is Ready for Next Generation Network

The following picture completely shows the components of the PUZZLE series. Choose the right components from CPU, NIC, software, manufacturing side, and fit them together. You will create a perfect network appliance.

Software/ Application

On the left hand side, it shows the S/W support from IEI. IEI will help customers to get device driver, application, other NFV basic software, DPDK, OvS, VPP, OpenDaylight and OpenStack. IEI will also help customers to deploy and install all of the software and build up their own NFV solutions.

System Integration

In testation On the right hand side, it shows the computing ability of the PUZZLE series.

IEI implements 5 major CPU brands, including Intel, AMD, Marvell, NXP, Cavium, and 3 kinds of accelerator cards for edge computing or AI computing.

NIC & Bandwidth

On the upper side, it shows the network connection ability of the PUZZLE series. IEI provides four brands of NIC from Aquantia, Intel, Broadcom, Mellanox, and with 1G, 2.5G, 5G, 10G or 25G different kinds of speed.

10/100Mb, 1G, 2.5G, 5G, 10G 25G, 100G

Designing & Manufacture

On the bottom side, it shows ARMOR Link cross IEI cross QNAP.

Most of network appliances are about network security. Some of the customers care about where the network appliance is designed and made. Therefore, we provide you two choices, design and manufacture in Taiwan or in China. QNAP factory is in New Taipei City, Taiwan, and ARMOR Link factory is located in Shanghai, China.

PUZZLE-A001 🕨

1U Rackmount Network Appliance with AMD EPYC[™] Embedded 3000 series processor, one PulM module slot & 2 PCIe x4 slots

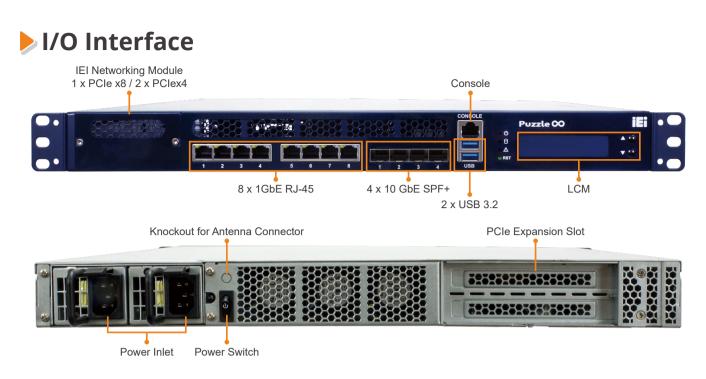

Features

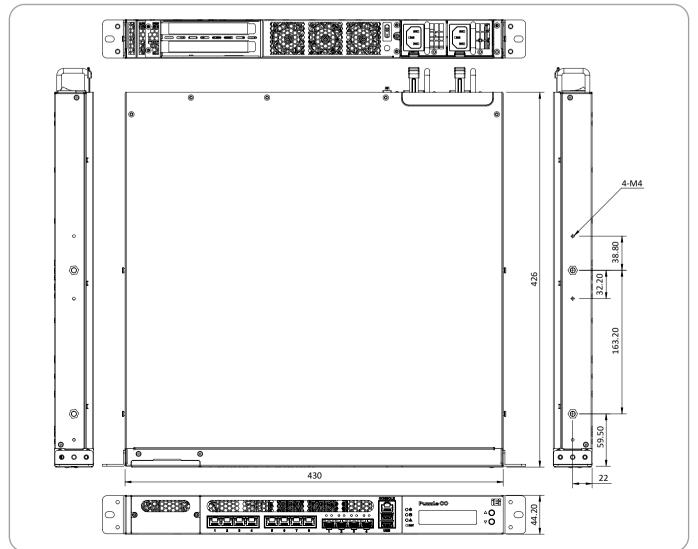

- AMD EPYC[™] Embedded 3000 series processor High-Performance CPU System on Chip
- Support 8 x GbE RJ-45 via BCM 5720, 4 x 10 GbE SFP+
- 4 x 288-pin DDR4 2666 MHz, UDIMM up to 64GB / RDIMM up to 128GB
- 1 x RJ-45 Console, 2 x USB 3.2 Gen 1 (5Gb/s), LCM
- 2 x 2.5" SATA drive bay, 1 x M.2 B-Key (SATA, USB 3.2 Gen 1 (5Gb/s)), 1 x PCIe mini card (PCIe, USB 2.0)
- Support two PCIe x4 slots, one PuIM module slot
- Redundant PSUs
